

Packaging for Foodstuffs General Information

GMUND FOR FOOD

Regulation (EG) No. 1935/2004 (the so-called "framework order"), which was stipulated by the European Parliament and the Council of the European Union, applies to all materials that come into contact with foodstuffs.

The papers in the GMUND FOR FOOD collection have been tested and certified to comply with this regulation. Accordingly, they are permitted to come into direct contact with dry, moist and oily foodstuffs. Gmund will provide copies of these certificates upon request. GMUND FOR FOOD is a natural paper with the characteristic properties of this material. We recommend a suitable primary packaging for moist and oily foodstuffs.

Legal Responsibilities:

Gmund is responsible for the legal conformity of papers manufactured by Gmund until the time of shipping. Outside the sphere of influence of the paper's manufacturer are factors such as printer's ink, finishing foils, packaging assemblies, material combinations, and parameters related to delivery, storage and processing, as well as the usage of ready-to-use printed products. Gmund can therefore not guarantee the legal conformity of the finished printed product. This can only be certified by representative analytical tests which are to be ordered by the printer, processor and/or filler of the finished packaging. By request, Gmund can provide contact information about qualified testing laboratories.
